## CERTIFICATES

\*Plumbing NC2 Passer

\*PLDT Microsoft Certificate

\*Webinars such as: "Python + Django Framework", "Python Basics", "Introduction to Server Configuration and Management", etc.

## PERSONAL PROJECTS

### Home Services Online Portal System (Capstone Project in Laravel)

- I developed this project utilizing the native Laravel Framework, a robust platform tailored for seamless integration of HTML and Laravel Backend components. This project served as my thesis, showcasing my proficiency in web development and my ability to harness the power of Laravel for a comprehensive web application

### Laundry Booking System (Capstone Project in Laravel)

- I built this project using Vue.js for the frontend and Laravel for the backend. It's worth noting that this project, although not my own thesis.

### Laundry Booking System using Ionic Framework + Vue.js

- This project consists of two parts: the Customer and Driver sides, built using the Ionic Framework and Vue.js. At the top is a Laravel project that serves as the Administrator. I'm using Laravel APIs, which allow me to easily call functions using Axios.

### Online Grading System (Practice in Laravel)

- When I defended my thesis, I decided to create a new project on my own. I came up with the idea because my school lacked an online grading system. I was just having fun and expanding my knowledge of the Laravel Framework as I worked on it
